1. Declaration

I, [Student Name], declare that this assignment, titled [Assignment Title], is my own original work and has not been copied from any other source except where explicitly acknowledged. I have not engaged in plagiarism, collusion, or any other form of academic misconduct in the preparation and submission of this assignment. All sources of information and data used in this assignment have been properly cited and referenced in accordance with the prescribed guidelines. I have not used unauthorized assistance in the preparation of this assignment and have not allowed any other student to copy my work. I am aware that any breach of academic integrity may result in disciplinary action as per the policies of Monash University, which may include failing this assignment or the course, and further academic penalties.

2. Github Check

Enter your Github details here.

Github Username *Enter your username here*	hxuu0127-eng
Repository Shared? *Have you started and shared your assignment repository with your tutor yet?*	https://github.com/hxuu0127-eng/GreenLink-Melbourne-A1.2-v1

3. Self-Evaluation

Rate your performance for each criteria. Put a ✓(tick) in the box where you think your work belongs.

Criteria	Exceeds Expectations	Meets Expectations	Needs Improvement	Fail to meet expectations
BR (C.1): Authentication	√			
BR (C.2): Role-based authentication	√			
BR (C.3): Rating		√		
BR (C.4): Security		√		

4. Screen Recording of BRs

Create a 3 minute video showing your basic web application in action! Upload this video to your Google Drive and put the link here (ensuring that you have updated the access list so its not private).

5. Reflections: Implementation of C.4 Security

If you have implemented BR C.4, in less than 200 words describe the approach that you have taken to implementing Security in your application. What security flaws were you trying to prevent and what security measures have you implemented to fix those flaws? How do you know that these measures will help prevent those issues from happening? Optionally you can cite external sources to provide evidence for your claim.

To reduce the common security risks, I add many security measures in the program. For example, Cross-Site Scripting (XSS) can have good influence on avoiding invalid users to attract the pages. While the users were inputting something or booking some activities, they might face some online attraction coming from XSS, to reduce this risk, I use the common text interpolation to display the comment what they used.

And I also implemented the client-side validation, because it would check the name or password what users inputted. I set the length limitation of the name and password to make sure that they would have the smallest and the biggest limitation, so it can also provide another validation.

6. Reflections: Challenges

What has been the most challenging part of this assignment for you? How has this stretched you as a programmer?

I think the most difficult thing during this assignment was doing layout, because the layout would have big influence on users' feeling. And the logical code was also very important, as it can have influence on whether the program can run correctly.

7. Declaration: Additional Help

Any tools that you used (including Gen AI or existing code reuse) must be declared here.

However, you may use GenAI for brainstorming and problem solving. You need to declare all such uses here. One row per help used.

Name	Description
Example: ChatGPT for brainstorming ideas	*I used ChatGPT to brainstorm how to do X because I was feeling stuck with Y problem.*
